

STAY CONNECTED

Connection is more important now than ever before, but staying connected and ensuring the health and well-being of our children as they return to school presents a challenge. How can we safeguard our students and ensure that they continue to be able to learn in a safe and healthy environment?

Early Detection of COVID-19 Symptoms

Identifying change of condition is the key to their protection.

Remote Monitoring is a Safer Solution

Our unique package of Remote Monitoring devices combined with our monitoring service allows parents and students to quickly monitor any changes in health condition. Using our HIPAA-secure system and included FDA cleared devices, screening for COVID-19 symptoms is safe and easy, allowing users to stay in touch with their health and reduce the spread of infection in classrooms.

Connected Care with Stay Connected

Stay Connected begins with a Link+ Smart Hub used to remotely monitor temperature, blood oxygen levels and blood pressure. Nurses monitor readings 24/7 to screen students quickly for COVID-19 symptoms and identify any issues that may indicate a problem, ensuring that the appropriate people are quickly notified of any changes.

Thermometer

Blood Pressure Monitor

Pulse/Oxygen Meter
