

Remote Patient Monitoring (RPM)

Company History

Stay Smart Care™ is the only senior care solution that provides continuous, non-intrusive healthcare monitoring with smart technology. Stay Smart Care offers Remote Patient Monitoring (RPM) solutions for senior living communities, at-home care models, home care agencies and Medicaid/Medicare providers.

In 2020, TekTone® Healthcare Communications acquired majority ownership in Stay Smart Care, as a part of its mission to continuously provide communication solutions that evolve with the needs of our world. Now based in Franklin, North Carolina, Stay Smart Care's Remote Patient Monitoring (RPM) offerings serve as the perfect complement to TekTone's Tek-CARE® platform, providing solutions for healthcare providers and facilities everywhere.

Stay Smart Care offers three solutions: Stay Connected, Stay Active and Stay Healthy.

Stay Connected

Stay Connected was designed to monitor for COVID-19 symptoms while eliminating the need for outside visitors. The kit allows seniors to monitor temperature, blood pressure and blood oxygen levels and automatically uploads the data to be monitored for any changes.

Stay Active

StayActive monitors activities of daily living (ADLs) and ensures that independent seniors are safe wherever they call home through passive fall detection technology. Fall and motion detection sensors placed throughout the residence ensure that help is notified if an accident occurs.

Stay Healthy

Stay Healthy provides the complete monitoring package with all the benefits of Stay Connected, Stay Active and more. Vitals and activity can be monitored by a loved one, care provider or medical professional through multiple means.
